

UNIVERSITY OF NORTH BENGAL

B.Sc. Programme 6th Semester Examination, 2022

SEC2-P2-STATISTICS

MONTE CARLO METHOD

Time Allotted: 2 Hours

Full Marks: 60

 $3 \times 4 = 12$

 $6 \times 4 = 24$

The figures in the margin indicate full marks. All symbols are of usual significance.

GROUP-A

- 1. Answer any *four* questions from the following:
 - (a) What is static simulation models?
 - (b) What is combined generators?
 - (c) What is dynamic simulation models?
 - (d) What is a Monte Carlo study?
 - (e) What are some typical situations where a Monte Carlo study is needed?
 - (f) What is simulation as an experiment?

GROUP-B

2. Answer any *four* questions from the following:

- (a) Explain random number generation.
- (b) Write a note about multiple-recursive generators.
- (c) Explain how to generate a random variable from p.d.f.

f(x) = 2x, $0 \le x \le 1$ = 0, otherwise

- (d) Explain generating continuous random variables.
- (e) Why is Monte Carlo simulation often necessary?
- (f) Discuss the uses of the Monte Carlo method for correlated quantities.

GROUP-C

3. Answer any *two* questions from the following:

- (a) Explain how to generate from the Beta(1, β) distribution using the inverse-transform method.
- (b) Explain how to generate Gaussian distribution by Box-Muller method.
- (c) Generate the binomial random variable from normal approximation.
- (d) Discuss the classification of simulation method.
